

Misys Funded Development Services

Tailor-made software solutions

As end users' demands evolve and channels to market become more sophisticated, the need for responsive and flexible systems becomes more paramount. Meeting clients' needs is key to growth and profitability and quite often this means adapting our technologies to deliver on and capture market demand.

At Misys we can help you achieve your business and end users objectives through customising your technology to meet market, business and regulatory demands. As a result, you gain a better return on your investment and real value from your Misys solutions.

Our solution

Misys is a trusted provider of advanced banking systems and technology solutions to international financial institutions around the world. To complement our systems and enable our customers to respond quickly to ever-changing business requirements, Misys offers a complete Funded Development service. This provides our customers with the flexibility to refine their core systems to meet market, regulatory, internal or head-office driven requirements, without the need for in-house development capacity.

Tailor-made software solutions

The Funded Development service offers functionality developed for a customer's specific requirements, or for a group of customers.

A number of different solutions can be provided to meet a variety of business needs, including:

- + Customisation of any Misys core system
- + Local requirements, such as local clearing systems
- + Middleware integration, e.g. the use of Meridian or other tools to build interfaces between systems within the bank
- + Bank or head-office specific accounting requirements

Key Benefits

- + Improved flexibility - respond quickly to market, regulatory and Head Office defined changes
- + Increased speed - rapidly bring new products to market
- + Lower risk - through our global pool of experienced developers and standardised methodology
- + Reduce cost - by reducing in-house development capacity and resource pooling
- + Increased efficiency - standard integration tools and product toolkits allow us to quickly build interfaces or product extensions using APIs into common functions

Defined process

- + Repeatable development model with reviews and checkpoints at each phase
- + Best practice Software Development Lifecycle methodology (SDLC)
- + PMI Project Management Professional (PMP) methodology for project management, including change control
- + Automated integration and Quality Assurance testing using industry-standard tools
- + Quality analysts regression test the software
- + Work undertaken within the strategic development framework to ensure consistent architecture and approach

Our focus is on our customers and building long term partnerships to help them grow and develop.

- + Brand new business function - anything from a small, one-off enhancement, to a complete new business module
- + Customer specific revaluation methodology / exposure calculations
- + Customer specific reporting requirements

Through a dedicated and well established Funded Development team covering all products, enhancement requests can be turned around quickly and items on the product roadmap can be brought forward. Where the software is deemed suitable for the core product it may be included in a later release as a separately switchable feature, thus providing the advantage of a more generic solution, without the associated upgrade costs.

Ring-fenced Development

Using a combination of our onshore Product Centres, offshore capability and trusted partners we can provide customers with a Ring-fenced Development service. A Ring-fenced Development team is a dedicated, scalable team designed to support the development needs of the Bank on its Misys platforms, with priorities set and managed by the Bank.

Global network of expertise

Our experience is built over 3 decades of delivering bespoke solutions to over 200 clients in more than 50 countries around the world.

Our world-class professional services experts have deep insight into your technical strategy and business priorities, as well as comprehensive experience of planning, designing, executing and optimising Misys solutions to develop ways of meeting them

Our focus is on our customers and on building long-term partnerships to help them grow and develop. Our capability to resource large projects quickly is supplemented by Misys-trained and accredited 3rd party local development partnerships.

Development framework

All Funded Development projects are undertaken using Misys' standard development model. This consists of six key stages through which requirements are scoped, planned, delivered and tested, with Project Management throughout the development lifecycle. We use best practice methodologies including PMI, for project management and change control.

Client Feedback: We were not just looking for a system but for a complete solution... We were greatly impressed with Misys' commitment to working closely with us in tailoring the solution to our needs...'

High Level Funded Development Process

1. Initiating the Business Requirement

- Standard Request Template – ERF
- High-level indication of effort & cost – Ballpark Estimate
- Contract T&M at this stage

2. Requirements Definition

- Requirements Definition (RD) agreed with Customer
- Requirements Estimate (RE) – more detailed estimate of effort and cost
- May contract Fixed Price once RD & RE agreed

6. Deployment

- Delivery of Enhancement
- User Acceptance Test Support
- Deployment Support
- Handover to Customer Services

3. Planning

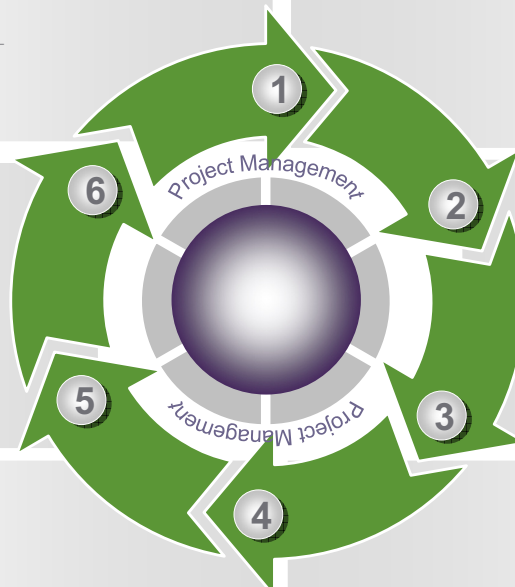

- Misys works with the Customer to schedule the software delivery

5. Testing

- As defined in planning, but includes:
- Link testing
 - System testing

4. Design & Construction

- Detailed technical design
- Development & unit testing
